and ID3000

mounting options

A wide variety of mounting options is available for the ID2000 and 3000 series intelligent fire alarm panels. The basic back-box options (standard, single extended and double extended) with matching bezels lend themselves to surface mounting and flush mounting alike. A full ranges of 19" rack mounting assemblies address the needs of more industrial type installation.

NOTIFIER's ID series intelligent fire alarm panels are available in the black/grey colour as standard. A light grey cover and bezel option with a high quality velvety finish and a stainless steel cover and bezel option with clean bright looks are also available for more architecturally challenging sites.

In area's where visibility is important or local codes require, the full range of back-boxes, covers and bezels are available in red.

The modular 19" rack mounting range combines the industrial versatility of 19" rack mounting with the aesthetically pleasing looks of the ID series panels. A Combination of 3U and 6U size mounting assemblies are available for the various modules. For a compact control centre the fire alarm system can be installed in the same 19" cabinet with the Public Address - Voice Alarm (PA/VA) and fire telephone systems.

back-boxes

standard black/grey colour

020-472-009	Standard back-box kit
020-473-009	Extended back-box kit
